

CATsoftPDF

Create PDF from your PowerBuilder applications without the need for installing a printer driver.

Just add the PBL to your Library list and call CreatePDF instead of printing the document. The PDF is returned as file or blob.

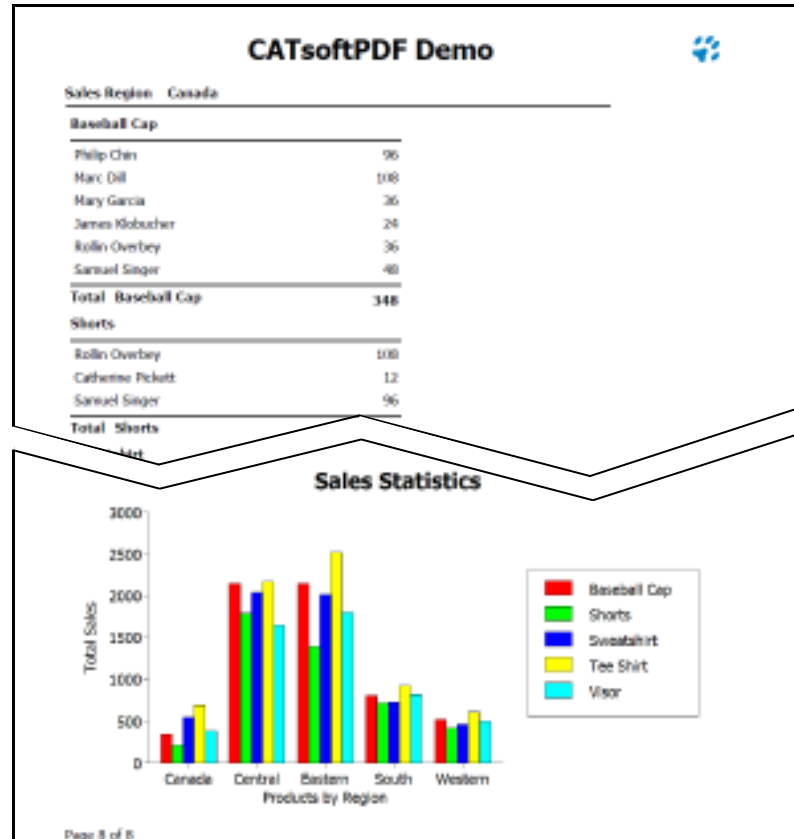

The deployment is very easy. You only have to distribute the PBL and accompanying DLLs with your application. No hassle with installing a printer driver or having the customer download the appropriate version of a PDF generator.

Licensing is per developer. If you're more than two developers you can buy a site license. NO runtime fees.

Price per Developer USD 480
Site License USD 1200
Update Subscription 20% / year

The update subscription makes sure you're always current.
